Cybercriminals are Targeting Law Firms

The legal industry is now recognized as one of the biggest targets for cybercriminals today. Clients trust you with their private information, and believe that you will keep it safe. In a PwC report entitled, *Safeguarding Your Firm From Cyber Attacks*, they note, "Privacy and confidentiality are bedrock qualities for law firms. The theft of client information could be devastating to a firm's reputation, which is their most important asset."¹

As more attacks are being perpetrated against law firms, it's time to take a serious look at your cybersecurity strategic plan. Is your firm prepared to withstand an attack?

210 Days or 6 Minutes? It's Your Call!

Our competitors take an average of 210 days to detect a data breach. Imagine what cybercriminals can do to your members' data and information in 210 days. TruShield takes an average of 6 minutes to accomplish the same and offers additional insights. Talk to us and we can help you protect your members at TruShield speed.

You Hold Valuable Information

Many people assume that the financial industry is the most vulnerable to cyberattacks because it allows criminals access to direct monetary gain. However, law firms have a lot more enticing data than they think. In a March 2016 *Wall Street Journal* article covering one of the biggest legal data breaches the authors noted, "Law firms are attractive targets because they hold trade secrets and other sensitive information about corporate clients, including details about undisclosed mergers and acquisitions that could be stolen for insider trading."²

It is important to understand that attacks can come from anywhere. “Whether criminal hackers are acting on their own, at the behest of intelligence agencies, or for corrupt corporate competitors, they are not just looking for personal information and credit card numbers; they are after any kind of intelligence that has economic value.”¹

Whether a hacker has social, political, or financial motives for accessing a law firm’s system, the consequences of a data breach can be severe. According to the *Wall Street Journal* article, “The cyberattacks show what law-enforcement officials have been warning companies about for years. As hacking tools and hackers for hire proliferate in certain corners of the Internet, it has become easier for criminals to breach computer networks as a way to further a range of crimes, from insider trading to identity theft.”²

The Legal Field is Taking Notice

The American Bar Association has a Cybersecurity Legal Task Force that was developed with the following mission, “The task force will examine risks posed by criminals, terrorists and nations that hope to steal personal and financial information, disrupt critical infrastructure, and wage a new kind of warfare on a battlefield of ones and zeros.”³

The Threat Isn’t Going Away

Criminals know that law firms are often underprepared when it comes to cybersecurity. The Bloomberg article, *Most Big Firms Have had Some Hacking: Business of Law*, reports just how bad things have gotten. The article cites that, “At least 80 percent of the biggest 100 law firms have had some sort of breach, Peter Tyrrell...said in a telephone interview.”⁴ This staggering number of firms that have been compromised sheds a harsh light on the growing security problem in the field.

TruShield Can Help

Our main goal is to keep your firm’s data safe at all times. We have a global team of experts working 24/7 every day of the year to monitor and combat potential threats. At TruShield, we also spend our time educating ourselves in the field of cybersecurity so that we know not just what is happening now, but what will be happening next. Staying one step ahead of cybercrime will ensure that neither you nor your clients see the negative repercussions that come with insufficient cybersecurity.

This is especially critical as law firms see hackers spending more and more time within their systems. “Hackers can maintain a presence in corporate systems for many months without detection, unless a firm takes proactive measures.”¹ Constant monitoring is required to find and remove threats that could already be hiding within your system.

While our proven prevent, detect, contain, and eradicate approach to threats is in place, you will also get a dedicated TruShield Advisor to assist you. This Advisor is available to answer your questions, guide you through any concerns you have, and help modify your plan as new advancements in the legal field impact the type of coverage you need. Our unique white-glove approach to customer service sets us apart from just being your cybercrime defense team. Instead, we are your partner and ally in protecting all of your sensitive digital data, giving you the peace of mind knowing that both your firm and your clients are completely protected.

Get in touch with us now to find out how simple it is to start getting the comprehensive cybersecurity protection that will keep you ahead of your competitors and out of negative press.
