### Protect Your Investments from Cybercrime

It is well known that cybercriminals target the financial sector. In a recent survey across the industry, 37% of Financial Services respondents stated that they were affected by cybercrime in the last 24 months. Whether criminals are looking for credit card information to sell on the black market, insider information to make illicit trades, or private details they can use for political gain, they are working extremely hard to access your systems.

In fact, Forbes ranked Financial Services as the 3rd most cyber-attacked industry in 2015. Cybercrime is increasing every year, and just this May, the U.S. SEC specifically named it as the biggest risk to the financial system. It's a huge problem, and it just keeps getting bigger.

Who is behind these attacks? The answer is pretty broad; it could be just about anyone. The financial industry is finding that cyberattacks aren't just caused by large-scale external criminal organizations either. A surprising 29% of fraud in the Financial Service Industry is committed by internal perpetrators.

Many businesses in the financial sector have taken note and put procedures in place that they assume will combat these risks. However, these companies are finding themselves unprepared when an attack occurs. This is because every company has different risk factors and vulnerabilities to consider. There is no one-size-fits-all security solution to keep every financial group in the global marketplace safe.

This issue was underscored by SEC Chair Mary Jo White, who stated, "What we found, as a general matter so far, is a lot of preparedness, a lot of awareness but also their policies and procedures are not tailored to their particular risks." How prepared are you to combat an attack?

## We Know the Field

We have insight into the financial field that allows TruShield to develop the strongest solutions.

Our nuanced knowledge of the financial field makes the TruShield Team uniquely qualified to understand your needs. In fact, one of our founders spent a large part of his career working with Credit Unions and various other financial institutions, helping them to develop comprehensive cybersecurity plans. We know what your concerns are regarding the private details your systems hold. Our strong foundational knowledge of the field allows us to suggest and develop specific strategic plans that are right for your organization.

## TruShield Has You Covered

We've spent years developing the best cybersecurity solutions.

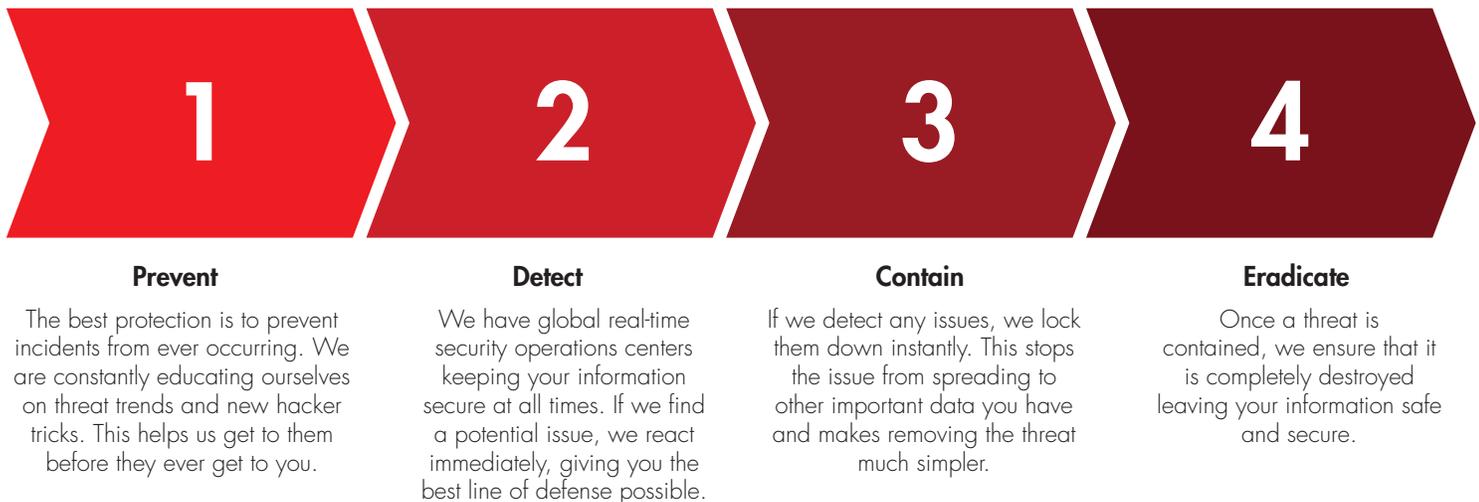

We provide comprehensive, bespoke cybersecurity strategies and take a white glove approach to customer service. You will be matched with a dedicated expert in the field to act as your Advisor and assist you with every step in developing your cybersecurity action plan. As your company grows and changes, so will your cybersecurity needs. This individualized approach to customer service sets TruShield apart, and gives you the comfort of always knowing you're fully supported.

To ensure your data is safe at all times, our 24/7 global team of experts works every day of the year to monitor your data and rapidly respond to any potential issues. Hackers don't take a day off, and neither do we. Our proven prevent, detect, contain, and eradicate approach to threats provides your organization with comprehensive protection.

Get in touch with us now to find out how simple it is to start getting the comprehensive cybersecurity protection that will keep your financial institution ahead of your competitors and your data safe.
